For my Travel Adventures website, I implemented several custom styling and design elements to make it visually appealing and easy to navigate. Three key customizations I focused on were custom fonts and typography, a personalized color scheme, and layout adjustments to improve the overall structure and user experience.

First, I used the 'Poppins' font throughout the website to give it a clean and modern look. I adjusted font sizes and weights to create a clear text hierarchy—h1 is larger to stand out, h2 has an accent-colored underline to make sections more distinct, and h3 is styled in deep teal to match the theme. I also increased the line height in paragraphs to improve readability.

Second, I customized the color scheme to make the website look more polished and visually cohesive. I used soft off-white and light teal for the background to keep it light and easy on the eyes, while the text is in dark blue-gray for contrast. The header and footer have a deep teal background to make them stand out, and I used an accent color for headings, hover effects, and links. To add interactivity, navigation links change color on hover, and I added a subtle box-shadow to the header for a slight 3D effect.

Finally, I made layout and spacing adjustments to ensure everything looks organized and well-spaced. The main content is centered (max-width: 1000px) with padding to keep it easy to read. I styled the destination sections as cards with a white background, rounded corners, and soft shadows. To make the site more interactive, I added a hover effect so the cards slightly lift when hovered over. The image gallery is arranged using `display: flex; justify-content: center;`, ensuring proper alignment, and images have rounded corners with a hover effect to make them more engaging. The footer matches the header for a consistent design, and links change color smoothly when hovered over.
